Personal Background Profile – W. Cheng Kong

🔷 Personal Information – W. Cheng Kong

Name: W. Cheng Kong

Year of Birth: 1999

Place of Birth: A rural village in Huainan, Anhui Province, China

---

Education Background

• 2013 – 2016:

Attended Huainan No.1 High School, a prestigious local institution known for its competitive academic atmosphere and intense ideological indoctrination.

• 2016 – 2020:

Enrolled in the School of Chemistry at Anhui University and graduated with outstanding academic performance. During this period, he began independent thinking on social structures, power dynamics, and the evolution of civilizations, gradually forming his own theoretical framework.

Professional Experience

• 2020 – 2022:

Joined China State Construction Group (CSCEC), one of China ' s largest state-owned enterprises, and settled in Beijing.

Gained deep insight into the actual operation of China ' s power structures, including hierarchical culture, emotional control mechanisms, and institutionalized repression.

Overseas Experience and Global Research Journey

• 2022 – 2024:

Traveled to the United States to experience the logic of democratic societies firsthand. Conducted independent comparative research and developed structural models analyzing the essence and export mechanisms of authoritarian civilizations.

• 2024 – Present:

Relocated to Europe. Engaged with liberal intellectual circles, human rights organizations, and structural think tanks. Continues to promote his frameworks, including the Civilization Health Model, Reverse Unification Theory, and the Global Civilization Immune System.

———

🧭 Research Focus and Mission

- The operational logic and global export mechanisms of Chinese civilization as a "structural control system"
- How to use systems modeling and structural language to assess the health level of individuals or societies
- How to build a "Global Civilization Immune System" to resist soft authoritarianism and structural assimilation
- Helping the free world understand the deep cultural control mechanisms in East Asia and improve its resilience
